

“Business Risk Management” review form example

Assignment type:

Students have to submit individually a 1-2 page write up applying some concepts, theory, framework etc. from class to a real world context. The students then have to write a brief constructive critique/peer review of two other students’ work. The peer review form asks them if they find a response is particularly exemplary, and this is used to help identify a couple of exemplary responses that are then made available (anonymously) to the students as examples. The students typically have a week to write their initial submission and then a further week to write the reviews. Participation points are awarded for the submissions (up to 5% for each exercise: with 3% for the initial submission and 2% for the reviews).

Review form:

1. Would you recommend this submission be shared with the class as an example of a good submission?

Definitely not / No / Maybe / Yes / Definitely yes

2. Please provide a constructive critique of the submission. Identify **what you learnt** from it, **what you disagree with** (and why) and any **other insights** you have.
